Technical Skills

Programming Languages: Go, Typescript, JS, SQL, C++
Messaging: RabbitMQ
Frameworks : ExpressJS, Hono, Gofiber
Backend Technologies : NodeJS, RabbitMQ, Cloudflare Workers
Databases: Postgres, Redis, MongoDB
Dev Tools: VScode, Git, Github, Postman, OpenCode
Libraries : GORM, go-validator, C++ STL
Coding Platform: Leetcode([Link](#)), Codeforces([Link](#))

Experience

• Jr. Software Development Engineer

June 24 – Ongoing

Kevit.io

Rajkot, Gujarat

Project: Chatomate (Enterprise Messaging Platform)([Link](#))

- Leading strategic migration of NestJS microservices to Go for the Chatomate platform processing ~**500 million API calls/month**.
- Achieved a **95% baseline memory reduction** ($183Mi \rightarrow 9Mi$) and a **71% reduction in peak CPU usage** ($318m \rightarrow 90m$) during k6 stress testing, for a URL shortener service.
- Developed a generic connection manager using **Go generics** with a 5-state machine, heartbeat monitoring, and exponential backoff for **MongoDB** and **Redis**.
- Built reusable Go packages for monorepo structure (`connmgr`, `logx`, `mongox`, `redisx`) to standardize production-grade connection management and type-safe operations.

Project: LeadMastro (Multi-tenant CRM)([Link](#))

- Architected and developed a complete **multi-tenant CRM backend** from scratch in Go, with 50+ database models and RBAC based role management.
- Built an event-driven automation engine using **RabbitMQ** with a custom worker pool pattern and dynamic per-tenant queue partitioning.
- Designed a per-user subscription lifecycle using **Razorpay**, including HMAC-verified webhooks for 10+ event types. Integrated **OAuth 2.0** (Gmail/Outlook), WhatsApp Business API, and **AWS** services (S3, SES, Cognito)

Leadership & Initiatives

- Leading **AI Adoption** across the engineering team by identifying and implementing LLM-based tools to optimize development workflows.
- Managed the development of **Introo** (internal product), providing technical roadmap guidance and direct mentorship to a junior intern.

Projects

• Bounty Hook (github.com/code100x/bounty-hook)

May 24 - May 24

- Automated the Tweets on twitter, sends twitter messages to announce bounty winners, chosen by repository admin.
- Integrated Twitter APIs and OAuth2 authentication, it utilizes serverless Cloudflare Workers to handle Bounty triggers from GitHub. Received a \$50 bounty price for contribution.
- Technology Used: Cloudflare Worker, Twitter API, Hono, Bun.

Academic Credentials

• Bachelor of Technology in Computer Engineering

2021-25

Marwadi Univesity, Rajkot

CGPA: **8.99**

• Higher Secondary Education

2020-21

Krishna International School, Rajkot

per: **84.4%**

Course Work

Data Structures
Web Development
Object Oriented Programming

Database Management
Computer Networks

Non Technical Skills
